

ESTIMATED FULL VALUE OF REAL PROPERTY IN COOK COUNTY: *2013-2022*

THE CIVIC FEDERATION

NOVEMBER 19, 2024

MAJOR FINDINGS

This report provides an estimate of the full market value of property in Cook County between tax years 2013 and 2022 using data provided by the Cook County Assessor's Office and the Illinois Department of Revenue. Data to estimate the full value of real estate in 2023 and 2024 using this report's methodology will not be available for several years.

The full market value of real estate in Cook County was nearly \$757 billion in tax assessment year 2022. Tax year 2022 is the most recent year for which data are available. The 2022 full value estimate represents an increase of \$61.8 billion, or 8.9%, from the 2021 estimated full value and an increase of \$296.8 billion, or 64.6% from 2013. Tax year 2022 is only the second year since 2006 that the full value of property has met or exceeded 2006 levels. Prior to 2006, the estimated full value of real estate in the City of Chicago and suburbs grew every year going back to at least 1995. In 2007 real estate values began to decline, hitting a low point in 2012. Since 2013, the estimated full values of all three triads have maintained an upward trend. The values decreased briefly in 2020, primarily as a result of COVID adjustments implemented by the Assessor, but increased again in 2021 and 2022.

In addition to Cook County as a whole, the report also estimates the full market value of real estate in the City of Chicago, North Cook County suburbs and South Cook County suburbs.¹ The estimated full market value of real estate in the City of Chicago increased by 8.3% in tax assessment year 2022, while the Northwest and Southwest suburbs experienced increases of 9.3% and 9.8%, respectively. The report also breaks down the estimated full value of property by assessment class for Chicago and the suburbs and for the County as a whole.

METHODOLOGY

The full value of property is estimated using two sources of data: 1) the total assessed value of property as reported by the Cook County Assessor's Office in the Cook County Final Abstract of Assessment and 2) the median² level of assessment reported by the Illinois Department of Revenue (IDOR) in the Assessment/Sales Ratio Study.

The Assessment/Sales Ratio Study collects data on property sales and calculates the ratio of assessed values to sales values. If additional data is submitted by the County Assessor or Board of Review after the initial data were collected³, a median assessment/sales ratio for an assessment year is computed, as well as an adjusted median ratio. This median ratio is commonly referred to as the "median level of assessment." The Department of Revenue calculates median levels of assessment for Class 1 (vacant land), Class 2 (residential), Class 3 (apartments), Class 5a (commercial) and Class 5b (industrial) properties. County ordinance

¹ See the Appendix for a map of the Cook County townships by triad assessment district.

² The median is found by ranking the individual assessment ratios in ascending or descending order and counting downward until the middle value is reached. If an even number of ratios is found, the two middle ratios are averaged to calculate the median.

³ For more information on assessment/sales ratios, see "Publication 136: Property Assessment and Equalization," Illinois Department of Revenue, April 2016, <https://www2.illinois.gov/rev/research/publications/pubs/Documents/pub-136.pdf>.

requires that these classes be assessed at the following levels for tax year 2019: Class 1–10%, Class 2–10%, Class 3–10%, Class 5a–25% and Class 5b–25%.⁴

Special note should be taken that the Department of Revenue’s ratio studies indicate a high coefficient of dispersion for vacant land, commercial assessments, and industrial assessments, which means there is likely to be wide variation within these classes from the calculated median for individual properties whose reported sale prices were included in the study. This has implications with regard to the uniformity of assessment for those types of properties, which is important to note for equitable taxation.⁵

The Civic Federation estimates the full value of property by dividing the median level of assessment (or adjusted median when available) into the total assessed value of for each class of property. In those classes for which there is not enough sales data for the Department of Revenue to calculate an adjusted median, the ordinance level or Total County Adjusted Median ratio is used.⁶ The full value estimate does not include state-assessed properties⁷ or properties that are exempt from real estate taxes.

TIMING AND LIMITATIONS

The Cook County Final Abstract of Assessment is typically published in the spring or summer following the assessment year (e.g., the 2022 Final Abstract was published in August 2023). The Assessment/Sales Ratio Study for Cook County is typically released in the spring or summer two years following the assessment year (e.g., the 2022 Assessment/Sales Ratio Study for Cook County was released in spring of 2024).

Readers should note that the trends identified in this report do not necessarily apply to Individual properties. This is because 1) they are estimates, and 2) they reflect medians, which by their nature do not represent the individual experience of every property.

⁴ These levels were effective starting with tax year 2009, pursuant to Cook County Ordinance 08-O-51 passed in September 2008. Class 3 declined to 13% in 2010 and 10% in 2011 and thereafter. Previous levels were: Class 1–22%, Class 2–16%, Class 3–26%, Class 5a–38% and Class 5b–36%.

⁵ See Civic Federation, “The Cook County Property Tax System and Fundamental Principles of Taxation,” November 22, 2010, for more information about uniformity of assessment in the Cook County property tax system.

⁶ Previously, the Department of Revenue did not provide assessment/sales ratio statistics for property classes with fewer than 25 usable property transactions. In 2010 the Department of Revenue responded to requests from the public by providing median levels of assessment and other statistics for property classes with low numbers of usable transactions. However, because statistical analysis of a small number of observations produces less reliable results, the Civic Federation continues to use the Total County Adjusted Median ratio to calculate the estimated full value of properties in property classes with small numbers of transactions. For the 2019 Assessment Sales Ratio Study, there were insufficient data to calculate an adjusted median for Class 3 properties in Triad 2 and Class 5b properties in Triads 1 and 3. For more on how small samples make statistical analysis less reliable, see International Association of Assessing Officers, *Standard on Ratio Studies*, (Kansas City, 2013), p. 16. Available at https://www.iaao.org/media/standards/Standard_on_Ratio_Studies.pdf.

⁷ The Illinois Department of Revenue assesses pollution control facilities, low sulfur dioxide coal fueled devices, railroad operating property and water treatment facilities.
